Oil & Gas Separation

Duration 5 Days

Course Introduction:

This training course aims to give candidates an opportunity to study the separation process, Idea of separation and determination what type of separators may be used.

The course will explain the different types of separators in oil and gas industry.

The design consideration for selecting the suitable type of separators.

Who Will Benefit?

This course will benefit process engineers, production technicians, QC specialists and all who deal with production facilities inside a gas plant.

Course Outline:

- Introduction for natural gas industry.
- Separation in oil and Gas.
- Idea of separation.
- Separators classification & components.
- Separators maintenance & trouble shootings.
- Tower Design
- Fractional Distillation
- Crude Oil Distillation
- Vacuum Distillation
- Special Application Distillation
